Project Name	Import Data using Transform Maps	Maximum Marks	2 Marks

Customer Problem Statement Template

Create a problem statement to understand the customer's point of view. The problem statement focuses the team on what matters when creating a useful and secure experience for the people who work with imported employee training records.

A well-articulated customer problem statement helps the team identify the challenge before selecting a solution. For this ServiceNow project, the statements focus on accurate data ingestion and reference resolution, together with role-based security for sensitive training information.

Project Description: ServiceNow project implementing data import, dot-walking, user roles, and ACL-based access control to securely manage employee training records.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
------------------------	-----------------	---------------	-----	---------	---------------------

PS-1 — Data Integration & Reference Resolution

Customer	ServiceNow System Administrator responsible for automated employee data ingestion and database integrity.
I am trying to	Import legacy employee training CSVs accurately and resolve manager and department references dynamically through dot-walking.
But	The imported data can contain duplicate employee records and inaccurate parent manager references.
Because	The CSVs lack uniform unique keys, while Transform Map Coalesce and dot-walk/script logic may be configured incorrectly.
Which makes me feel	Frustrated and anxious about database pollution, corrupted reporting, and the additional hours required for cleanup.

PS-2 — Role-Based Data Security & Compliance

Customer	HR Compliance & Operations Lead overseeing sensitive employee performance metrics and security audit policies.
I am trying to	Ensure that only designated HR administrators and managers can view sensitive employee training scores.
But	General or unauthorized users may be able to view or edit confidential training results.
Because	The custom training table requires appropriate table-level and field-level Read/Write ACL controls.
Which makes me feel	Vulnerable and stressed about privacy compliance and potential security-audit failures.

Define the Problem Statements

Date	31 January 2025	Team ID	6ab61594fa5e5219dc387253
Project Name	Import Data using Transform Maps	Maximum Marks	2 Marks

Problem Statement Summary

Problem	Customer	Core Need	Key Barrier
PS-1	ServiceNow System Administrator	Accurate employee training imports with reliable manager and department references.	Duplicate records and inaccurate reference resolution.
PS-2	HR Compliance & Operations Lead	Restrict sensitive training scores to authorized users through roles and ACLs.	Insufficient table/field-level access controls.

Consolidated Customer View

The project has two connected customer needs: the imported training data must remain accurate and correctly linked to employee information, and sensitive training results must be protected from unauthorized access. The problem statements therefore provide the basis for subsequent brainstorming and prioritization of Transform Map, dot-walking, role, and ACL solutions.

How Might We — Problem Framing

PS-1	How might we import employee training data accurately into ServiceNow while resolving manager and department references through reliable dot-walking?
PS-2	How might we ensure that sensitive employee training records are accessible only to authorized users through appropriate roles and ACLs?

Expected Focus for the Next Ideation Step

Data Integration	Explore Coalesce strategies, duplicate prevention, reference lookups, and dot-walking for employee, manager, and department relationships.
Security & Governance	Explore user roles, table-level ACLs, field-level ACLs, and dynamic access checks for sensitive training fields.
Validation	Consider import testing, error handling, reference integrity, and access validation before production use.

Reference template structure: Ideation Phase → Define the Problem Statements → Customer Problem Statement Template → PS-1 / PS-2. The uploaded template identifies the customer-centered format as the basis for articulating the problem.
