Project Name	Import Data using Transform Maps	Maximum Marks	4 Marks

PROJECT DESIGN PHASE-II | DATA FLOW DIAGRAM & USER STORIES

Data Flow Diagrams (DFD)

System Overview: A Data Flow Diagram (DFD) visually depicts information movement within the ServiceNow import and transform pipeline. It maps data entry from legacy CSV sources, staging table ingestion, transform map transformations (coalesce & dot-walking), and final target table storage under strict role-based access control.

Data Flow Description:

- User Configuration (Step 1):** The administrator uploads the legacy CSV data file into the ServiceNow Import Sets module.
- Staging Table Ingestion (Step 2):** Raw records are parsed and stored in the staging table (`u\_training\_staging`) without altering production data.
- Transform Execution & Coalesce (Step 3):** The Transform Map evaluates incoming rows against existing records using coalesce keys (e.g., Employee ID) to determine whether to insert or update. Dot-walking resolves department and manager references.
- Target Table Storage & Security (Step 4):** Clean, validated records are written to the target table (`u\_employee\_training\_records`), protected by role-based ACLs.

User Stories

User Type	Epic	USN	User Story / Task	Acceptance Criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
Customer (Mobile user)	Registration	USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
Customer (Mobile user)	Registration	USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
Customer (Mobile user)	Registration	USN-4	As a user, I can register for the application through Gmail	OAuth authentication succeeds and creates user profile	Medium	Sprint-1
Customer (Mobile user)	Login	USN-5	As a user, I can log into the application by entering email & password	User session established and dashboard loads	High	Sprint-1
Customer (Mobile user)	Dashboard	USN-6	As a user, I can view my profile and import status on the mobile dashboard	Dashboard renders real-time status widgets	Medium	Sprint-2
Customer (Web user)	Data Import	USN-7	As a web user, I can upload legacy CSV training records into staging tables	CSV parses correctly and staging records populate	High	Sprint-1
Customer Care Executive	Support & Logs	USN-8	As a support executive, I can review transform staging error logs and failed rows	Error logs display failure reasons for troubleshooting	Medium	Sprint-2
Administrator	Transform Maps	USN-9	As an admin, I can configure coalesce keys and dot-walking reference mapping rules	Transform engine correctly updates existing records without duplication	High	Sprint-1
Administrator	Security & ACLs	USN-10	As an admin, I can configure role-based access control and table ACLs	Unauthorized users are restricted from sensitive records	High	Sprint-2

Summary Notes

The user stories cover the end-to-end lifecycle of importing legacy CSV data using ServiceNow transform maps while incorporating the requested template user types and sprint allocations.
