Project Name	Import Data using Transform Maps	Maximum Marks	2 Marks

PROJECT DESIGN PHASE-II | PROPOSED SOLUTION TEMPLATE

Proposed Solution Details

Overview: The project team has detailed the proposed solution parameters below, addressing core problem statements, unique innovations, business models, and enterprise scalability.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Organizations face severe operational inefficiencies, data corruption, and compliance risks when importing and managing bulk employee training records. Manual CSV uploads lead to duplicate records, broken foreign key relationships (such as manager and department references), and data exposure due to inadequate field-level security controls.
2	Idea / Solution description	An enterprise ServiceNow data ingestion and transformation pipeline utilizing Import Sets and Custom Transform Maps. The solution integrates automated Coalesce keys (u_emp_id) for intelligent deduplication, custom onBefore transform scripts for data validation, dynamic dot-walking to resolve manager and department references against sys_user and cmn_department tables, and rigorous role-based Access Control Lists (ACLs).
3	Novelty / Uniqueness	Combines automated multi-source data ingestion with real-time dynamic dot-walking reference resolution and robust ACL-backed security in a unified ServiceNow application. It eliminates manual spreadsheet cleansing, automates relationship mapping, and enforces strict compliance without requiring external middleware.
4	Social Impact / Customer Satisfaction	Reduces administrative fatigue and data entry errors for HR professionals, ensures employees have transparent, secure access to their training transcripts and certifications, and provides leadership and compliance auditors with reliable, tamper-proof reporting.
5	Business Model (Revenue Model)	Enterprise SaaS internal operational efficiency model, deployable as a certified ServiceNow application store solution with tiered licensing based on active employee user seats and automated compliance auditing volume.
6	Scalability of the Solution	Built on ServiceNow's cloud-native multi-tenant architecture, leveraging asynchronous batch import sets, scheduled background data transformers, and indexed database fields to seamlessly scale to millions of employee training records across global enterprise business units without performance degradation.
